

DECKING BY KLEIBERIT HOTCOATING

CERTIFIED OUTDOOR PROTECTION WITH ADVANCED TECHNOLOGY

Developments in outdoor flooring focus on high-performance surfaces and durable finishes. KLEIBERIT HotCoating enables designs and digital printing applications, e.g. for decking, while meeting demanding requirements such as anti-slip properties, UV stability, and resistance to water, heat, cold, and abrasion.

For decades, KLEIBERIT has supplied products for outdoor applications and built extensive expertise in this field. Combining HotCoating with a UV varnish, KLEIBERIT developed a transparent coating system that protects both the substrate and pigments from weathering and UV exposure. Based on an optimized chemical formulation with tailored additives, the system has been certified worldwide according to relevant industry standards.

ADVANTAGES

- extremely high abrasion and impact resistance (well above AC5 achievable)
- embossed textures (Impress Touch)
- warm, soft touch and chemical resistance
- ideal for combination with digital printing
- suitable for outdoor decks and heavy-duty applications
